Monthly Sentinel Tap Temperature Log

FREE SAMPLE

One month of sentinel outlet checks · Hot: 50°C or above within 1 minute · Cold: below 20°C within 2 minutes (change targets to suit your risk assessment)

Site / property	Month / year	Checked by	Hot target °C	Cold target °C (below)
			50	20

Date	Outlet / location	Type (hot/cold/mixed)	Hot °C after 1 min	Hot PASS / FAIL	Cold °C after 2 min	Cold PASS / FAIL	Initials	Notes / action taken

Full version adds: all 6 logbook tabs (temperatures, TMV service records, weekly flushing, remedials, asset register, inspection-ready dashboard), drop-down outlets and instructions. Please note: This is a record-keeping aid. It doesn't replace a legionella risk assessment or a competent person, it doesn't certify compliance with anything, and it isn't affiliated with or endorsed by the HSE. You're responsible for the readings you enter and for checking the results against your own risk assessment. Always follow your own site's written scheme.
